

HA118041NT

Playback Preamplifier and Recording Amplifier for VCR's

HA118041NT includes a recording preamplifier and recording amplifier for two-head video cassette recorders. Operating voltage is 5 V.

Functions

- 2-channel playback preamplifier
- 2-channel recording amplifier (including driver)
- FM peaking amplifier
- FM AGC
- FM phase equalizer
- Mute circuit for recording

Features

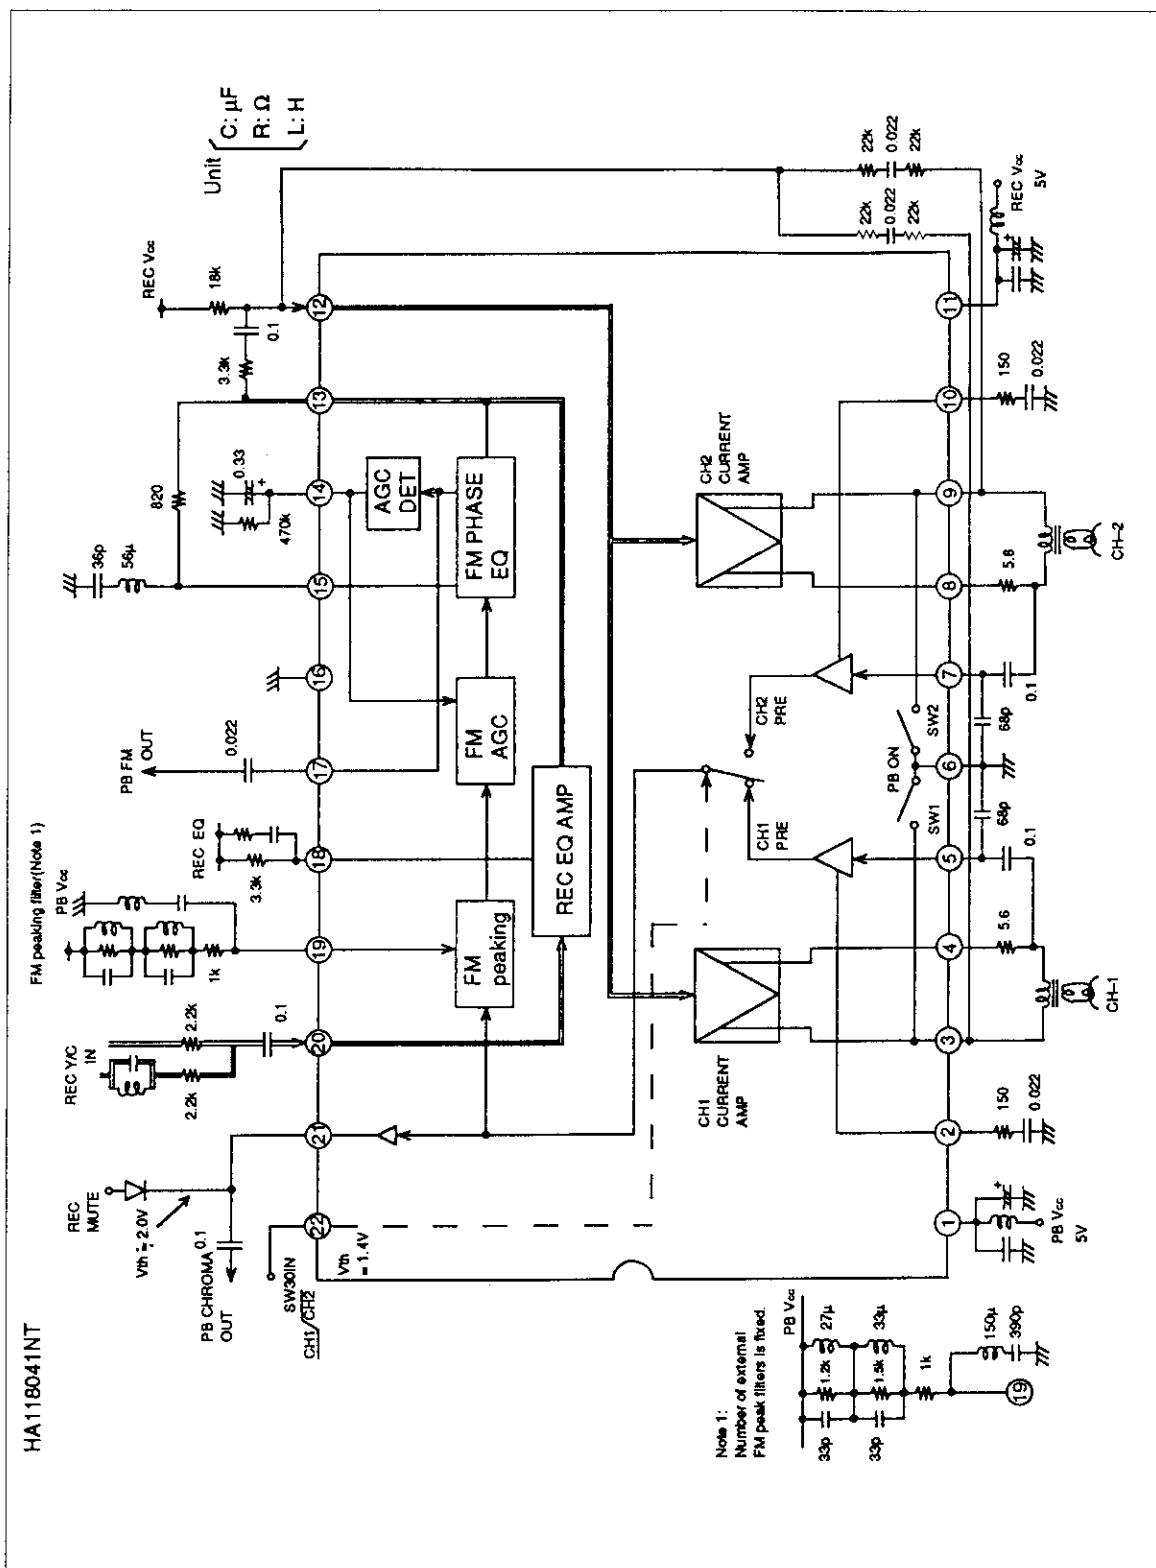

- Low playback amplifier input capacitance of 24 pF
- Operating power supply voltage of REC 5 V/PB 5 V (simultaneous supply not possible, switch function provided)
- Constant-current output system of recording amplifier provides stable output, even under external load fluctuation.
- FM peaking pin allows external setting of the peak value.
- On-chip FM phase equalizer provides easy configuration with outside circuits.
- REC equalizer pin allows external recording frequency characteristic compensation.
- On-chip playback/record switching transistor reduces the number of peripherals for simplified board design.

Block Diagram

Pin Description

Pin No.	Function Name	Standard DC Voltage (V)	Signal Type	Signal Level	I/O Format	Impedance (Ω)	Remarks
1	PB Vcc						
2	CH1 Preamplifier Q. ADJ pin	0 2.2				1.5 k	
3	CH1 current amplifier output 1	4.0	REC Y + C	6 Vpp max			Collector of transistor
	SW1	0	DC				
4	CH1 current amplifier output 2	4.1 0					Emitter of transistor
5	CH1 Preamplifier input	0 0.7	PB Y + C	0.2 mVpp (1 mVpp max)			
6	Cascode amplifier GND						
7	CH2 preamplifier input	0 0.7	PB Y + C	0.2 mVpp (1 mVpp max)			
8	CH2 current amplifier output 2	4.1 0					Emitter of transistor
9	CH2 current amplifier output 1	4.0 0	REC Y + C	6 Vpp max			Collector of transistor
	SW2		DC				
10	CH2 preamplifier Q. ADJ pin	0 2.2				1.5 k	
11	REC Vcc						
12	Current amplifier input	1.65 0	DC				Emitter of transistor Note 1

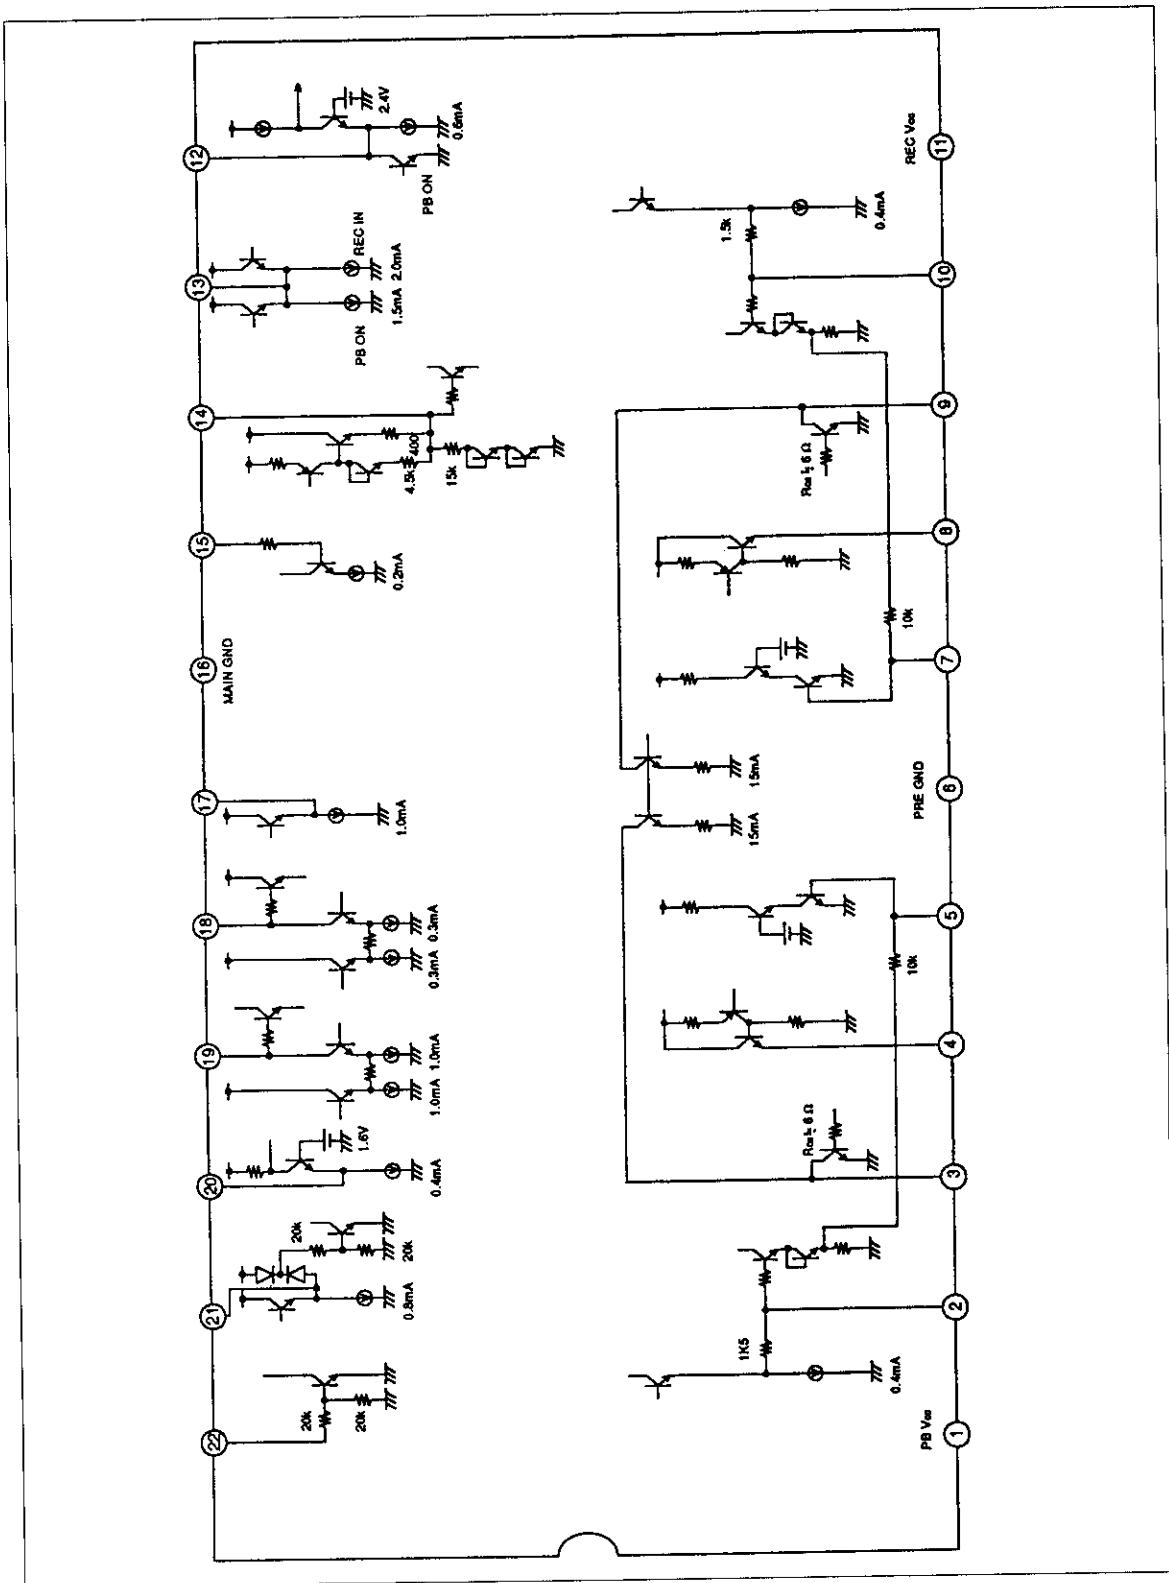

Note 1: Current amplifier driver idling current is set by a resistor connected externally at pin 12.
 Standard: for 18k Ω , 15 mA 14 k Ω to 22 k Ω (18 mA to 12 mA).

HA118041NT

Pin Description (cont)

Pin No.	Function Name	Standard DC Voltage (V)			I/O Format Impedance (Ω)	Remarks
			Signal Type	Signal Level		
13	REC EQ amplifier output	2.6	REC Y + C	0.5 Vpp	Emitter follower	
	FM equalizer filter 1	1.9	PBY	70 m Vpp		
14	AGC filter	0	DC		15 k	
		1.4				
15	FM equalizer filter 2	2.6			Base of transistor	
		1.9				
16	GND					
17	PB FM output	0	PB - Y	0.4 Vpp	Emitter follower	
		2.6				
18	REC equalizer filter	4.0			Collector of transistor	
		0				
19	FM peaking filter	0		$R_L = 1 \text{ k}\Omega$ 70 m Vpp	Collector of transistor	
		4.0				
20	REC Y.C input	0.9			Emitter of transistor	
		0				
21	REC mute signal input;	-	H level: mute	$V_{th} = 2.0 \text{ V}$	20 k/40 k	H/L
	PB chrominance output	3.1	PB Y + C	0.14 Vpp		
22	SW30 input		H level: CH2	$V_{th} = 1.4 \text{ V}$	20 k	H level
			L level: CH1			
					40 k	L level

Input/Output Circuit

HA118041NT

Electrical Characteristics ($T_a = 25^\circ C$)

Item	Symbol	Min	Typ	Max	Unit	Test Condition	Application	Terminal	Note
PB current consumption	I_{CP}		24		mA	Incurrent at pin 1 (CH1)		1	
Preamplifier gain	G_{VP}	53.5	56	58.5	dB	Pin 5 and 7 input; $V_{IN} = 0.2 \text{ mVpp}$; $f = 4 \text{ MHz}$		21	
Preamplifier frequency characteristic	ΔG_{VF}		-1.0		dB	Pin 5 and 7 input; $V_{IN} = 0.2 \text{ mVpp}$; 10 MHz/600 kHz level ratio		21	
Preamplifier interchannel crosstalk	CT_P	—	-43		dB	$V_{IN} = 0.5 \text{ mVpp}$ $f = 4 \text{ MHz}$		21	
Preamplifier interchannel gain differential	ΔG_P	-1.0	0	+1.0	dB	$V_{IN} = 0.2 \text{ mVpp}$ $f = 4 \text{ MHz}$		21	
Preamplifier interchannel output DC offset	V_{OF}	-50	0	+50	mV			21	
PB head SW TRS ON resistance	R_{CS}	—	6		Ω	$f = 4 \text{ MHz}$		9	
Head amplifier switch threshold	V_{THH}		1.4		V	22		21	
AGC output level	V_{AGC}	250	300	350	mV	Pin 19 input; $V_{IN} = 70 \text{ mVpp}$; $f = 4 \text{ MHz}$		17	
AGC control characteristics 1	ΔV_{AGC}	0	+0.3	+1.0	dB	$V_{IN} = 0.16 \text{ Vpp}/70 \text{ mVpp}$ level ratio		17	
AGC control characteristics 2	ΔV_{AGC}	-1.0	-0.3	0	dB	$V_{IN} = 13 \text{ mVpp}/70 \text{ mVpp}$ level ratio		17	
REC current consumption	I_{CR}		42		mA	Incurrent at pin 11 (MUTE OFF)		11	
Maximum recording current	I_{RM}		19	—	mApp	$L = 8.2 \mu\text{H}$; $f = 4 \text{ MHz}$; secondary distortion -40 dB; pin 20 input	Between 3 and 4 Between 8 and 9		(1)
Current amp current gain	G_I		38		dB				
Interchannel current gain differential	ΔI_g	-1.0	0	+1.0	dB	Interchannel level differential when $I_L = 10 \text{ mApp}$; $f = 4 \text{ MHz}$	Between 3 and 4 Between 8 and 9		
Crosstalk during REC MUTE	CTR	—	-45	—	dB	Level ratio when $I_L = 20 \text{ mApp}$; $f = 4 \text{ MHz}$ and during MUTE.			

Electrical Characteristics (Ta = 25 °C) (cont)

Item	Symbol	Min	Typ	Max	Unit	Test Condition	Application	Terminal	Note
REC MUTE switching threshold	V _{THM}	—	2.0	—	V	21			↓
REC equalizer amp gain	G _{REQ}	—	8.3	—	dB	Pin 20 input; Vin = 0.5 Vpp; f = 4 MHz		13	

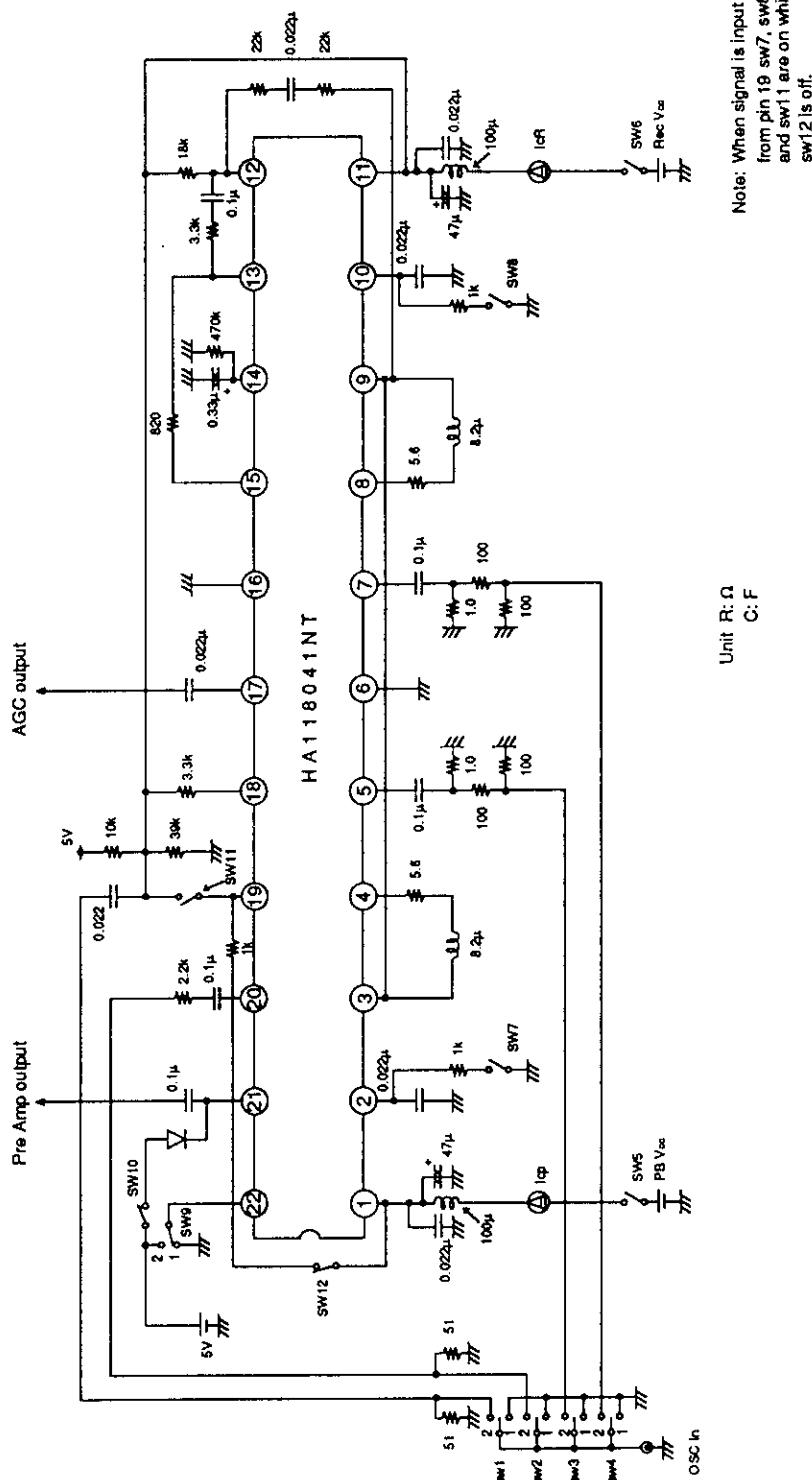

Note: Do not apply voltage to REC Vcc and PB Vcc simultaneously.

(1): HA118041NT's recording amplifier uses feedback damping to compensate for the frequency characteristic peak generated by head resonance. The maximum recording current noted above is for the following conditions:

Load L = 8.2 μH

Damping resistance = 22 kΩ + 22 kΩ
