### DESCRIPTION

The M74HC4094 is an high speed CMOS 8 BIT SIPO SHIFT LATCH REGISTER fabricated with silicon gate C<sup>2</sup>MOS technology.

This device consists of an 8 bit shift register and an 8 bit latch with 3 state output buffer. Data is shifted serially through the shift register on the positive going transition of the clock input signal. The output of the last stage (Q<sub>s</sub>) can be used to cascade several devices.

Data on the Q<sub>s</sub> output is transferred to a second output (Q'<sub>s</sub>) on the following negative transition of

the clock input signal. The data of each stage of the shift register is provided with a latch, which latches data on the negative going transition of the STROBE input signal. When the STROBE input is held high, data propagates through the latch to a 3-state output buffer.

This buffer is enabled when OUTPUT ENABLE input is taken high.

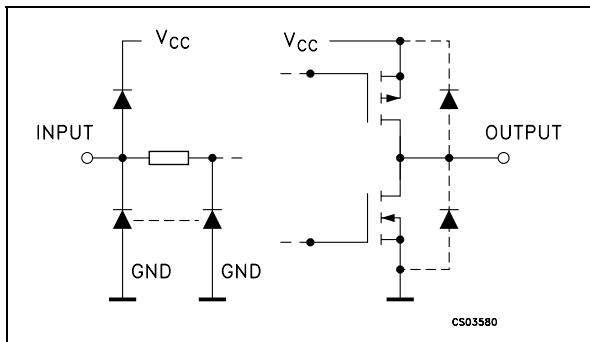

All inputs are equipped with protection circuits against static discharge and transient excess voltage.
